EN

SISO-70 is a compact sliding solution for frameless glass panels, combining latest technology with an attractive minimalist design. The system is quick and easy to install, and is particularly appropriate for domestic and commercial applications, where it integrates seamlessly into any design.

There is a choice between function and / or an anti-shock braking system.

SISO-70 conceals all of its sliding components within the top track, giving a pleasing aesthetic appearance.

SISO-70 is offered for both ceiling and wall mounted applications; for wall mounted installations, the system offers a unique feature, in that the distance between the wall and the glass panel can be adjusted between a minimal 14mm up to 25mm depending on design requirements, thereby adding a useful versatility to the other benefits of the system.
